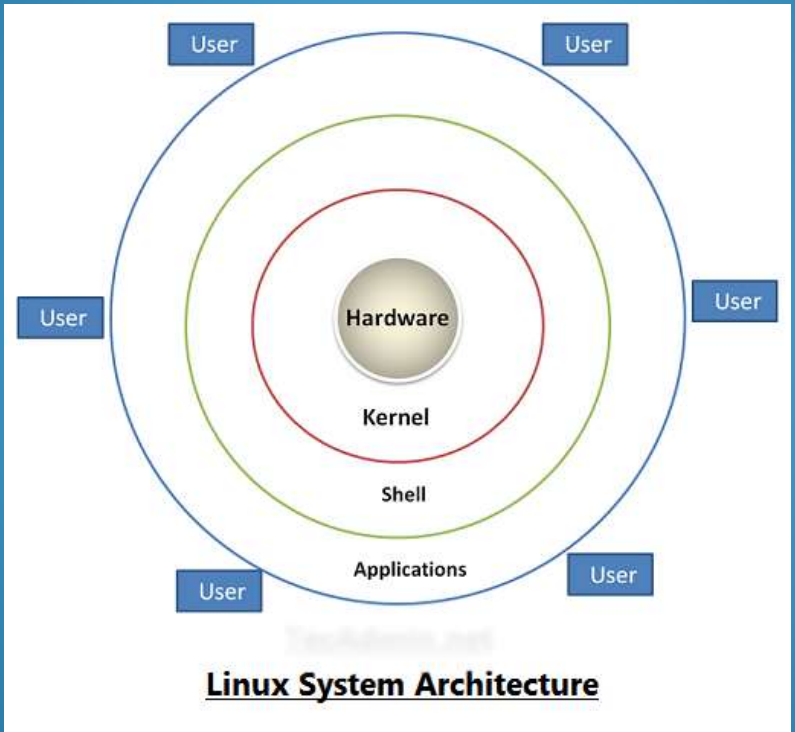
LINUX Architecture



redhat

Pragathi Technologies

Hardware – Hardware consists of all physical devices attached to the System. For example: Hard disk drive, RAM, Motherboard, CPU etc.

Kernel – Kernel is the core component for any (Linux) operating system which directly interacts with the hardware

Shell – Shell is the interface which takes input from Users and sends instructions to the Kernel, Also takes the output from Kernel and send the result back to output shell.

Applications – These are the utility programs which runs on Shell. This can be any application like Your web browser, media player, text editor etc.
